1.0 % Concentration****Methodology**

Separately, we have inoculated ten germs with a concentration of more than 100,000 micro-organisms in test tubes that enclose 5 millilitres of your sample received January 31, 2008.

After a time of contact of 15 minutes, 1 and 24 hours, we have taken an aliquot of this contaminated sample and we place it on a culture medium adequate to their growth.

**Results**
